Allow 2-way flow of content between admins and end users	✓	✗	✗
Create multiple data rooms from a single account	✓	✗	✗
Set up an NDA or Terms between data rooms and end users	✓	✗	✗

[1] Vitrium Security converts Word & Excel documents to a secure web viewer format. For Excel, the web viewer will inheret whatever page settings were applied to the original file. Vitrium Vault will display Excel files in a Spreadsheet Viewer which has a more realistic "Excel" feeling.

[2] Video and audio protection requires an additional charge so be sure to inform your Vitrium sales rep before they provide you a quote.

[3] 'Full DRM' requires a user to authenticate first to get access to content and you can take advantage of every DRM policy that Vitrium offers. ' Social DRM' content does not require user authentication at all, but you can apply some DRM controls.
