

Vitrium introduces Security and Digital Rights Management for Image Files. Apply DRM controls and track how images are accessed and distributed as secure web links and PDFs.

Protect your image files with Vitrium and gain insight into how files are accessed, used, and distributed. Upload your copyrighted, confidential, or revenue earning images to Vitrium Security and apply DRM controls. Prevent copying and printing, add watermarks, revoke access and remote delete files, whether online or offline. Catalog and distribute them through Vitrium’s Secure Client Portal, where you audience can access all files in one place. Simply drag and drop images files on to Vitrium’s dashboard to apply encryption and DRM controls, in addition to gathering data and a analytics into how files are used and accessed.

Vitrium for Image Security

Share Images in Secure Client Portal. Vitrium Security’s Secure Client Portal can be set up within minutes, and lets you share all images with designated audience members and contacts. Organize and catalog images with Vitrium’s Content Tag Management functionality, making it easy for your audience to search and preview images associated with their accounts. All permission settings for users and images, including dynamic watermarks, are automatically applied to the Secure Client Portal. With just a click of the mouse and a few items to set up, you can deploy your branded portal.

Image DRM Controls. With Vitrium Security, you are in complete control. Choose from a variety of image control and digital rights management settings including print and copy control, custom watermarks, browser limits, expiry dates, and more. Additionally, with Vitrium’s content security software, you can:

- Set printing, copying, highlighting & annotation controls
- Customize watermarks and apply dynamic data to them
- Customize login forms, settings, policies, and more
- Set expiry dates or revoke access at any time

Gain Insight & Analytical Data. Monitor the effectiveness of your secured images by gathering data on what files are being opened, by whom, on what date and time, from which IP address, machine ID and browser or application. With Vitrium’s enhanced analytics in its content security software, you can get more granular information such as the time spent on content, pages viewed, and so on.

- View information at a glance via the dashboard
- Drill into more detail in the reports
- View user activity for any specific file or date range
- Analyze total content views, pages viewed, time spent
- Export any report to Excel for further analysis
- Drill down into a specific file or user

Only Vitrium Security protects your content without limiting your reach.

Protect your content. Protect your business.

Integrate Seamlessly With Other Systems. Vitrium can work with your team, a systems integrator, or other consultant to implement and integrate Vitrium Security in your business with any 3rd party or homegrown system. Leverage our APIs or work closely with our professional services team to integrate with:

- Active Directory, SQL Server, or other databases
- Document management and ECM systems like SharePoint
- eCommerce systems like Magento or Shopify
- Learning management systems like Blackboard or LoudCloud
- CRM systems like Salesforce or Microsoft Dynamics
- Association management systems like Personify
- Websites, Intranets and other web portals
- Any proprietary or 3rd party system

How Vitrium Security Works

Add Files

Add your content to Vitrium Security and the system will apply military-grade encryption. Acceptable file types include video formats (MP4, MOV, WMV, FLV, AVI, and MKV), documents (PDF, DOC/ODT, XLS/ODS, PPT/ODP, RTF, and TXT), and popular image files (JPG, PNG, GIF, BMP, and TIF).

Add Users & Groups

Select the audience for your content. Decide who can access your secured files, place them in user groups, or leave them as individual recipients. Vitrium can also be integrated with your own user credential system.

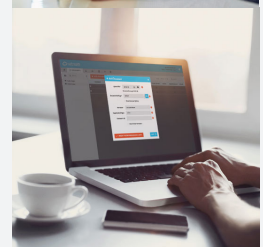

Apply Security & Controls

Protect your files with military-grade 256-bit AES encryption and control access by setting various limits - viewing, browser, date, IP address limits and more. Block printing & copying, and insert dynamic watermarks.

Share With Users

Publish, share, or embed your secured content as a Secure Web Link or Secure PDF file (for documents and images) via a your website, client portal, through email or company network, eCommerce site, document management system, CRM, AMS, or any 3rd party system.

 We can help you integrate Vitrium Security with any system you might be using.
