## Encrypt & Control Content

- Files are encrypted with AES encryption
- Every page of your content is encrypted
- Restrict downloading and printing
- Prevent copying and screen capture
- Apply visible, dynamic watermarks

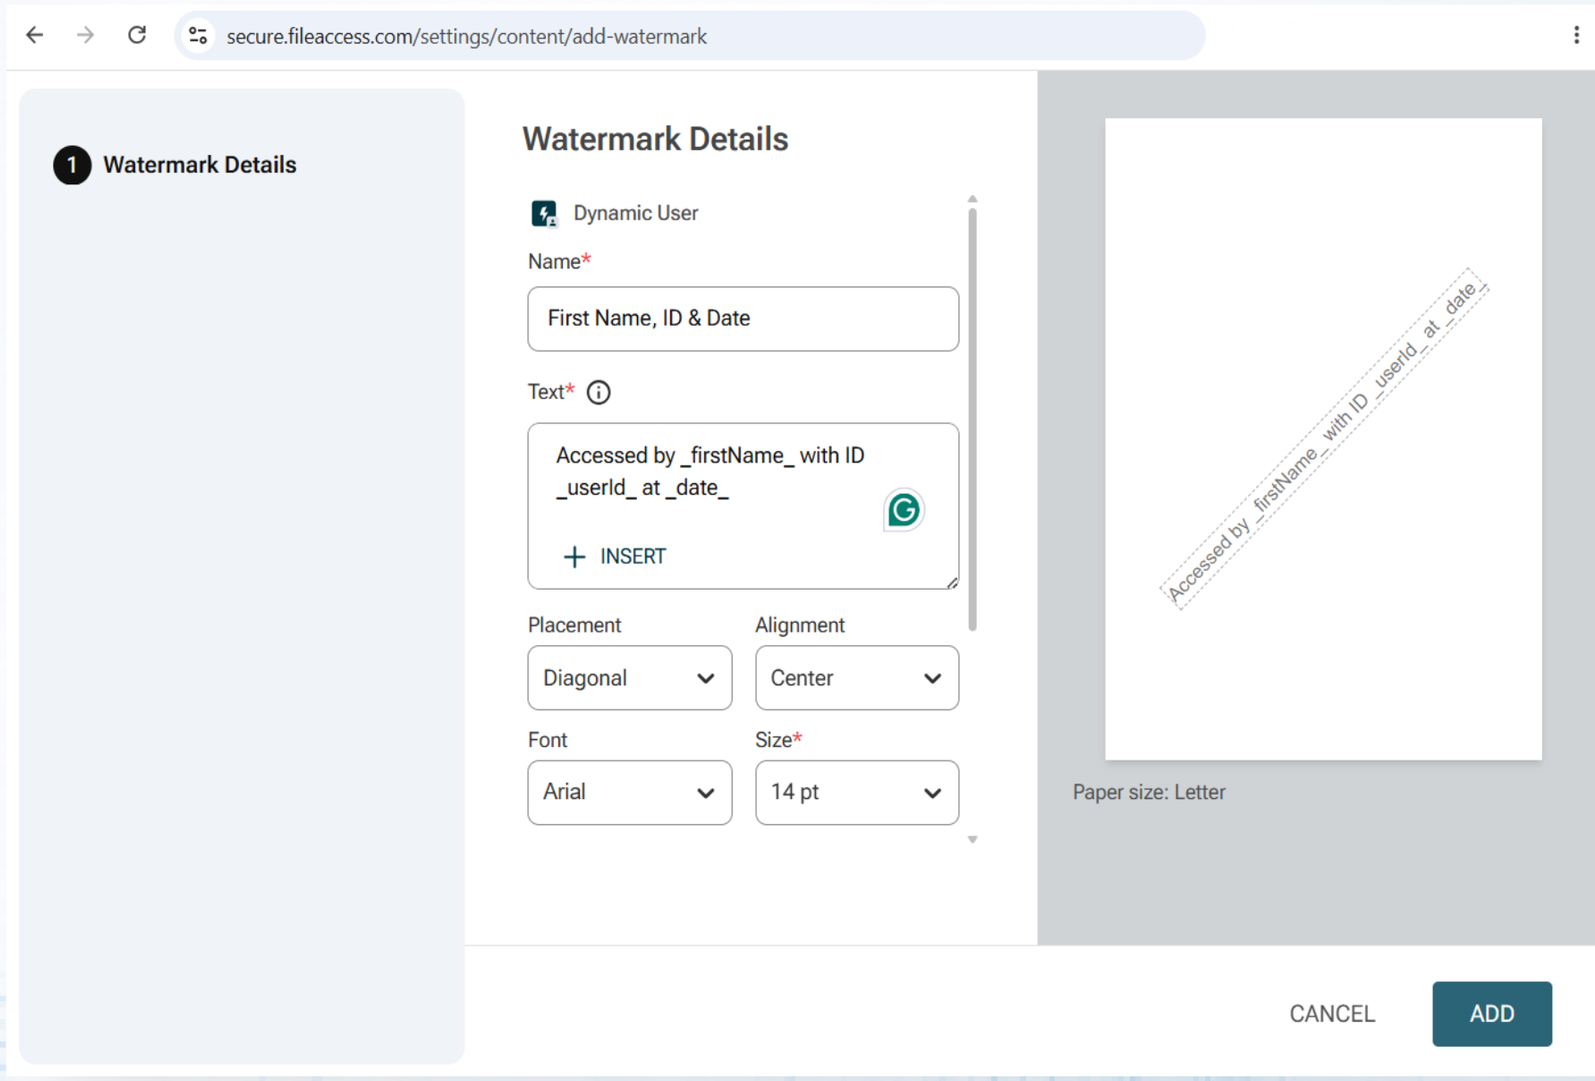

## Extensive DRM Controls

- Choose from over 20 DRM controls
- Set device limits and print limits
- Set open limits and IP address limits
- Expire content by date or a timeframe
- Restrict or allow by country or region
- Restrict or allow by IP address or arange
- Control web viewer toolbar functions
- Apply different DRM policies to different users

## Dynamic Watermarking

- Apply multiple watermarks to your content
- Insert dynamic variables such as name, user ID, date & time, IP address
- Customize color, font, size, alignment, and placement
- Preview your watermark as you create it
- Set default watermarks for your account

## Admin Roles

- **Account Admin**
  Full control over entire account & portals
- **Portal Admin**
  Full control over assigned portal
- **Portal Manager**
  Control content for assigned portal

## Role-Based Access Permissions

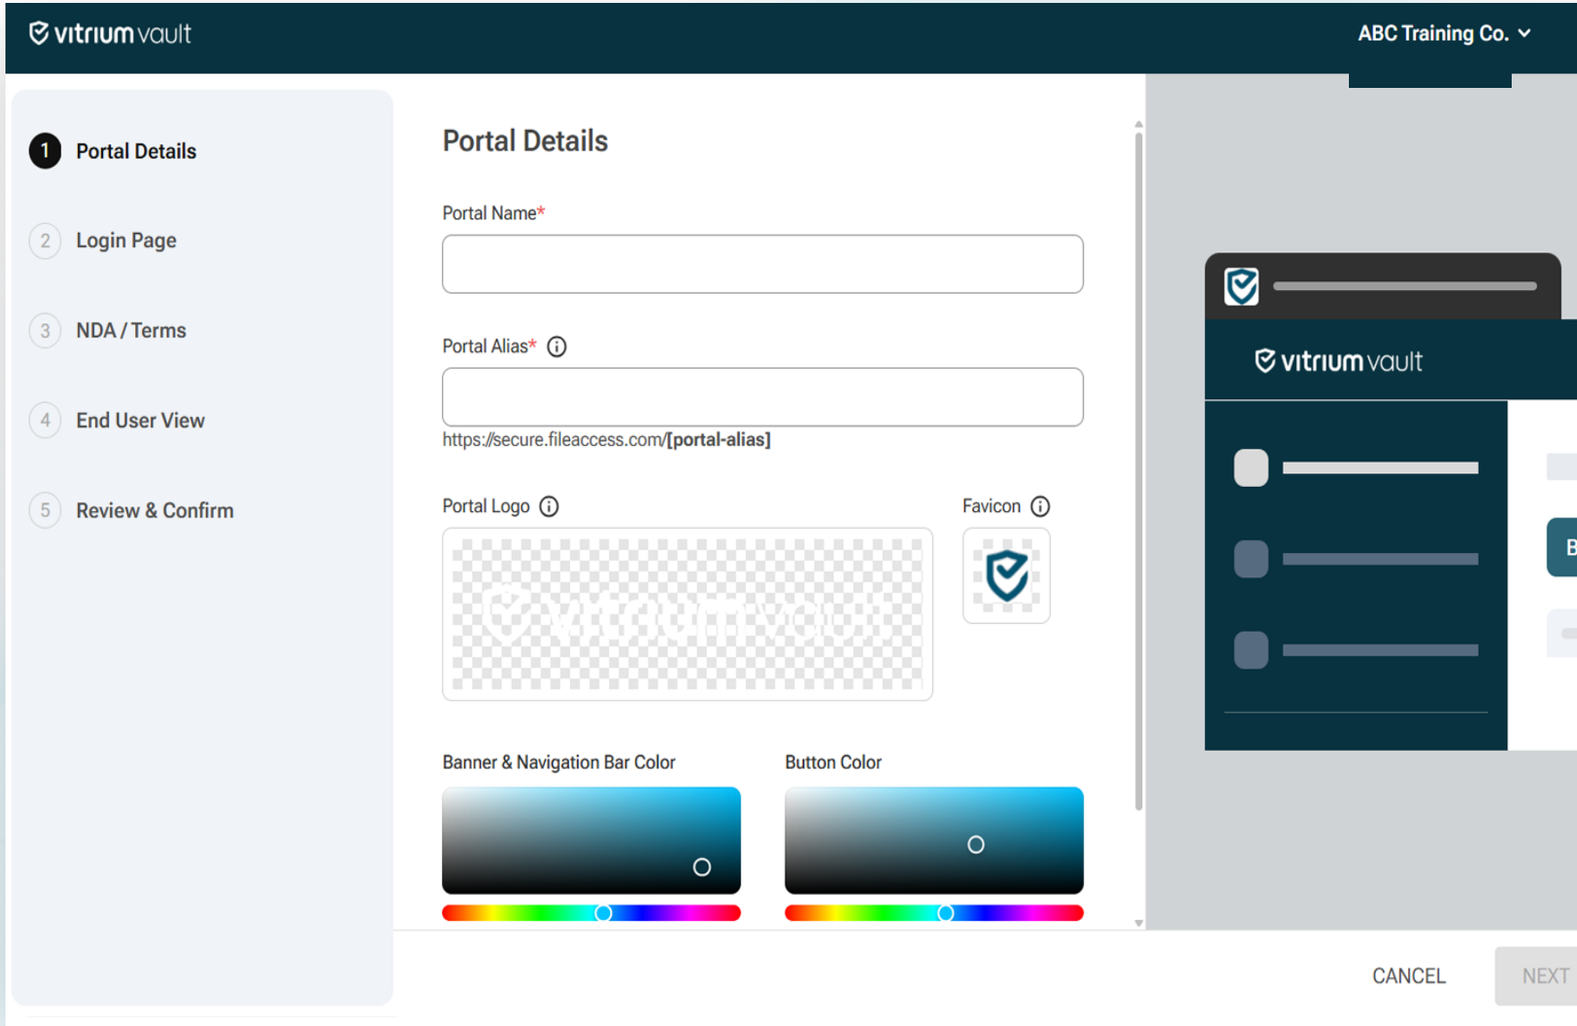

- Choose from different admin roles for your internal team and your clients
- Control which team members have access to which data rooms or folders
- Assign different roles for end users depending on your needs
- Control which content or folders end users have access to
- Apply different DRM policies to different users or groups

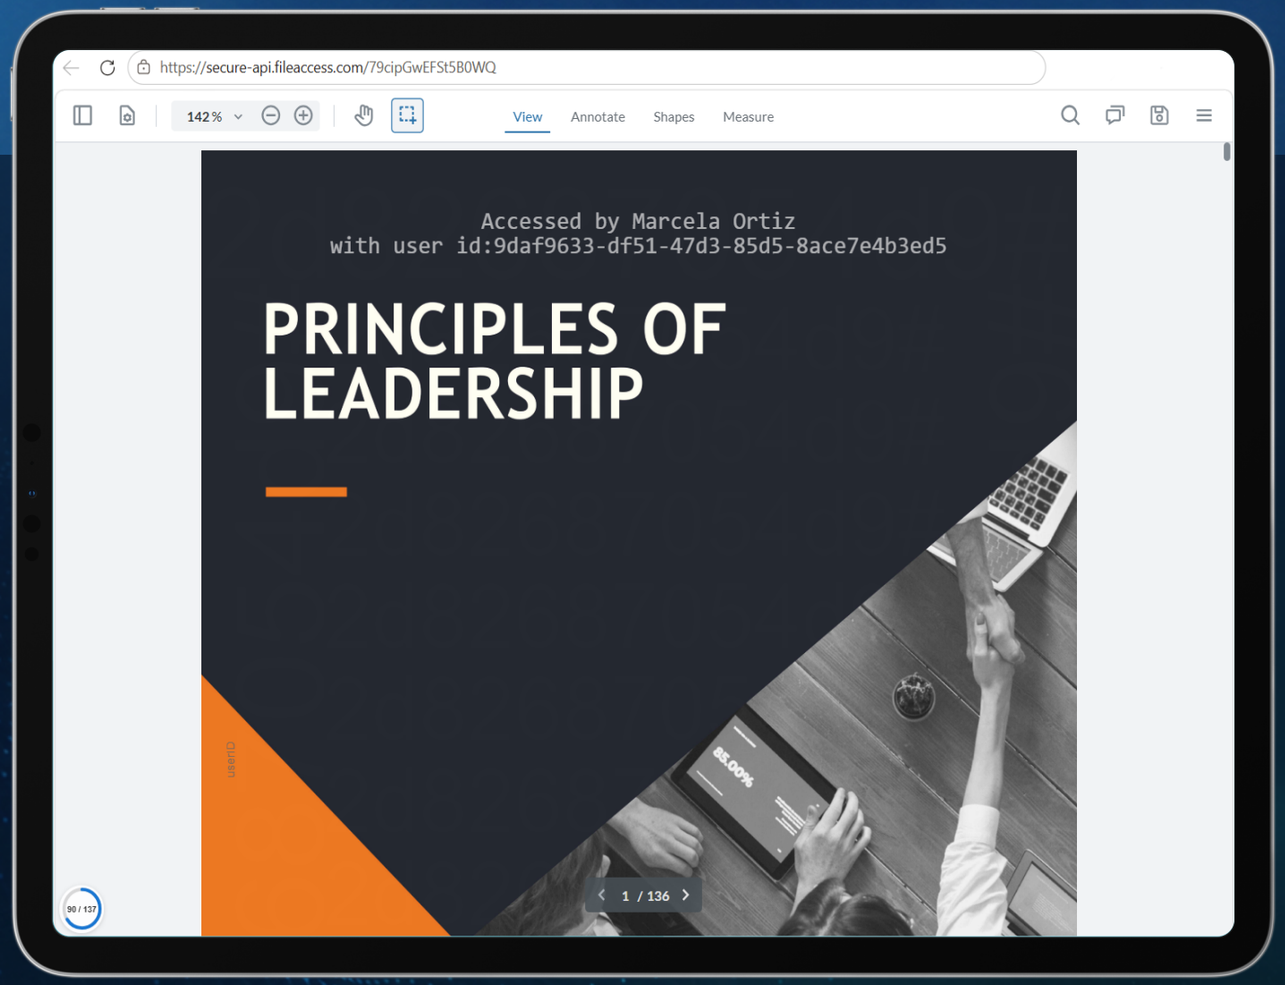

## End Users

- **Corporate Admin**
  Access content, manage account users
- **Contributor**
  Can view and upload content
- **Viewer**
  View content only

## Multi-Portal Management

- Set up different secure data rooms (portals)
- Customize each portal with your own branding
- Display content in a list view or grid view
- Customize folders with colours and/or images
- Preview your portal design as you set it up
- Apply a background image to your login page
- Add an NDA/agreement to the login process
- Use fileaccess.com domain or choose your own

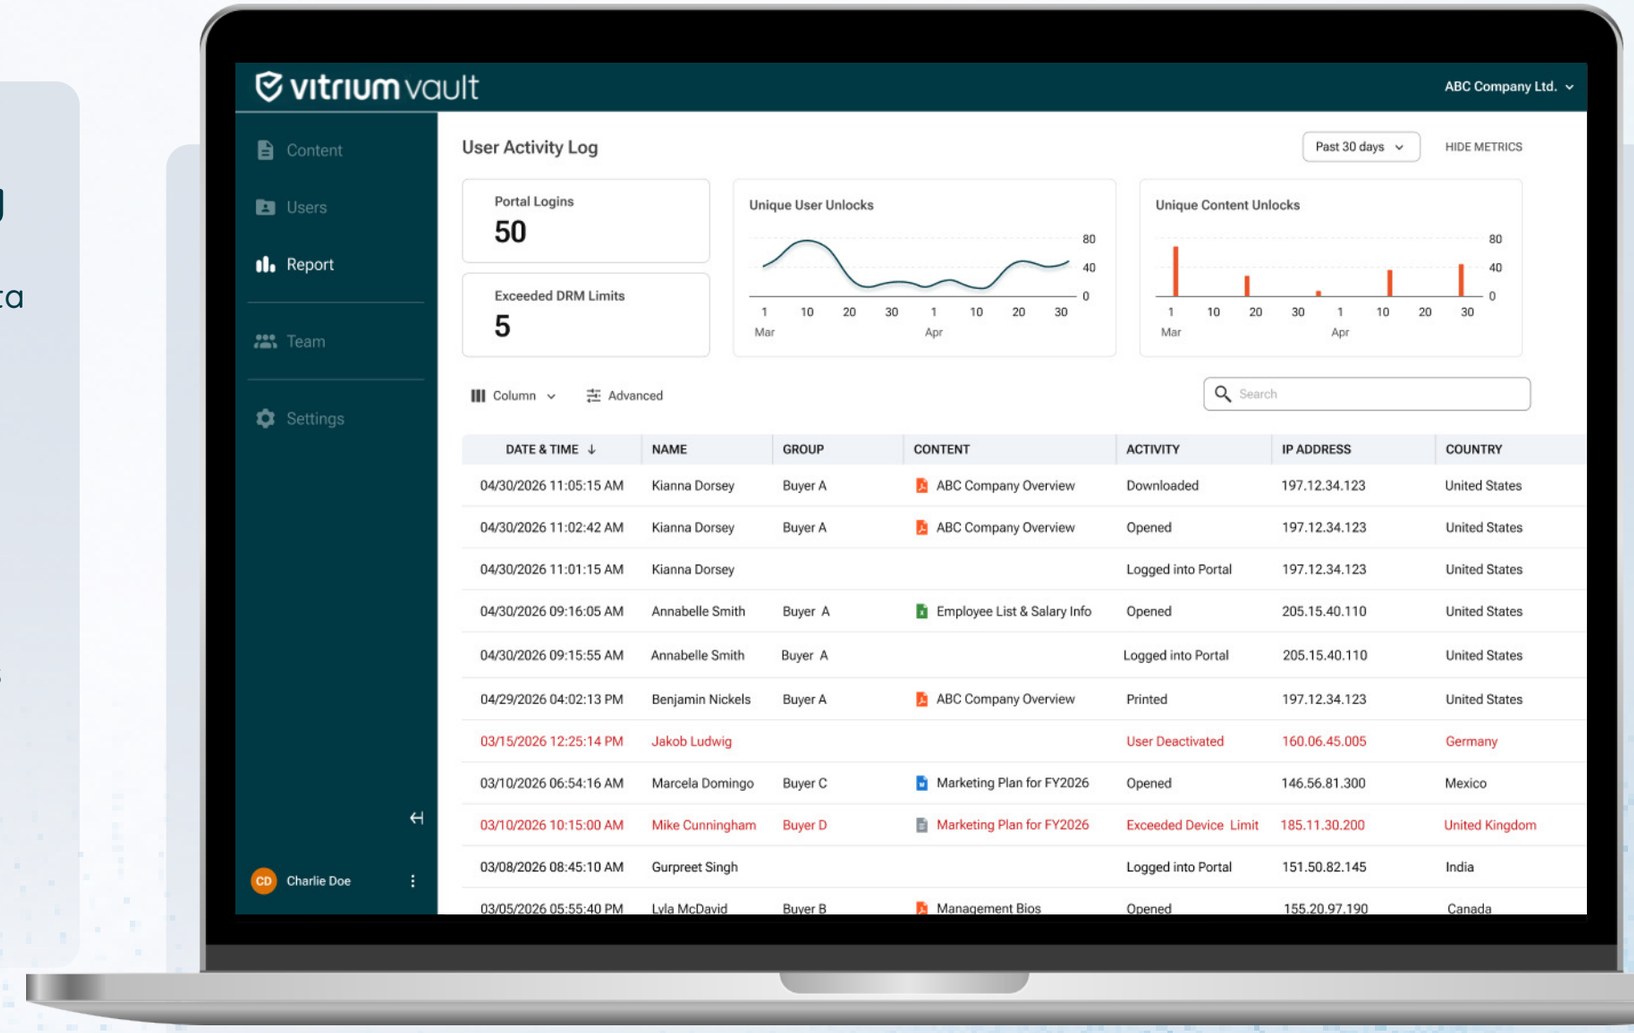

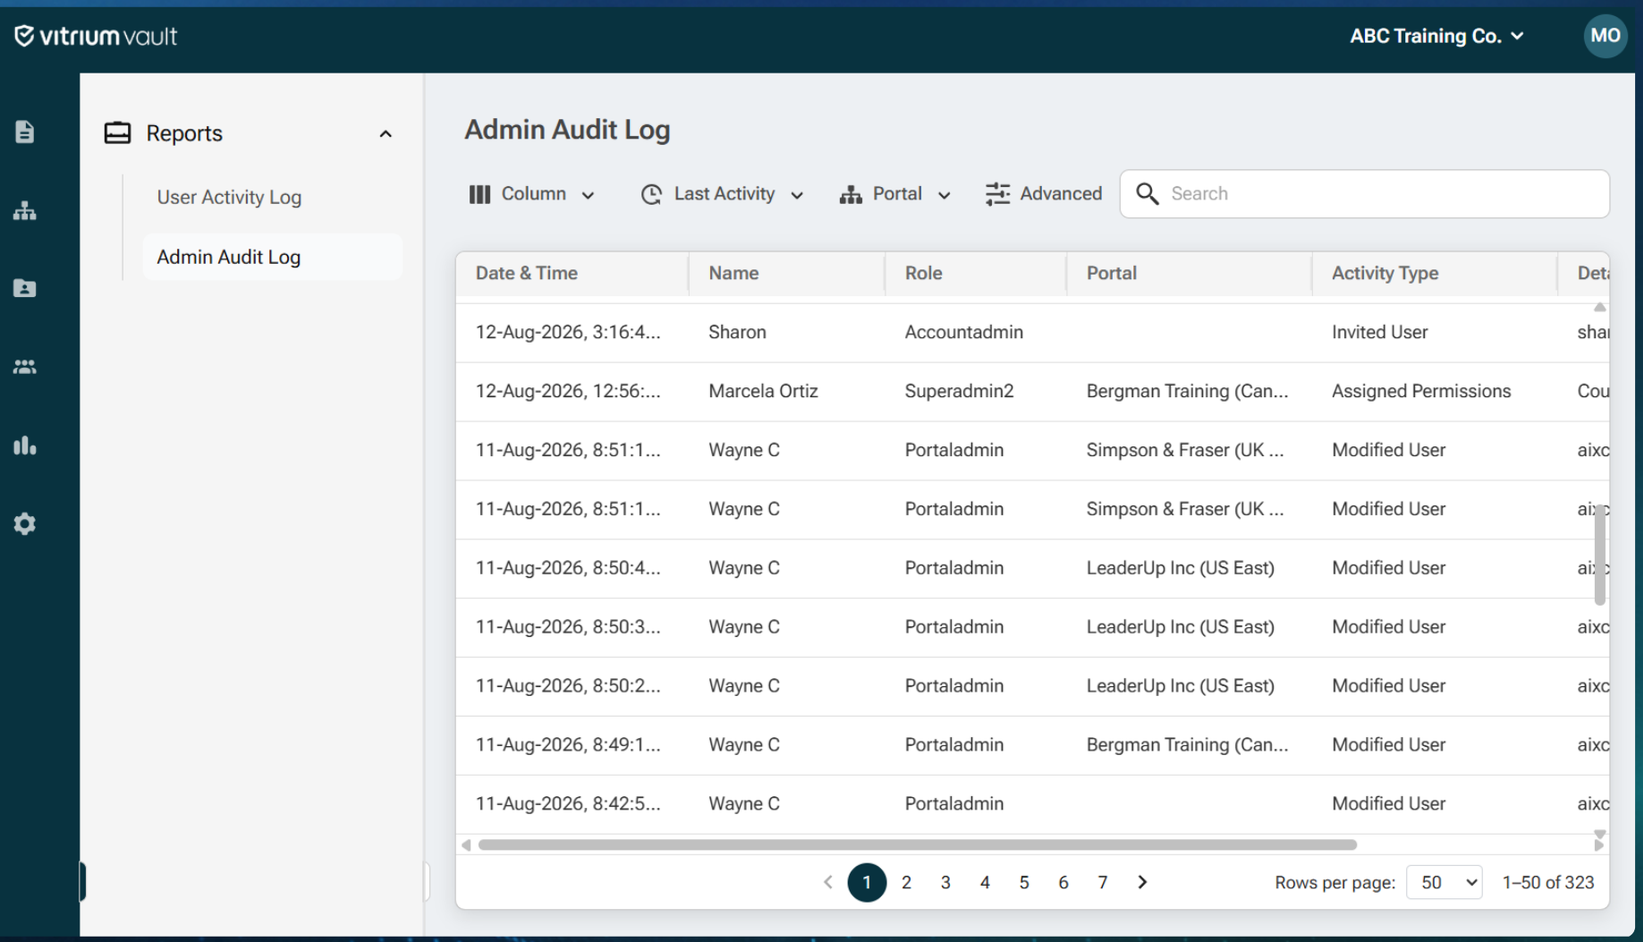

## Zero-Footprint Web Viewer

- Content is converted into a secure web viewer format
- No additional plug-ins, apps, or other software is needed
- Content can be viewed on desktop, tablet, or mobile
- Web viewer content appears the same as your original file
- Numerous page-viewing and annotation features
- View page thumbnails preview or show document bookmarks
- Users see the same annotations across all their devices

## Real-Time User Activity Tracking

- View a summary of your account's activity data
- Track specific content that users are opening
- Know what date & time users are accessing content on, and from which browser or app
- Identify the IP address & location of users
- Click on a user or content for granular insights
- Use this data for compliance & audit purposes

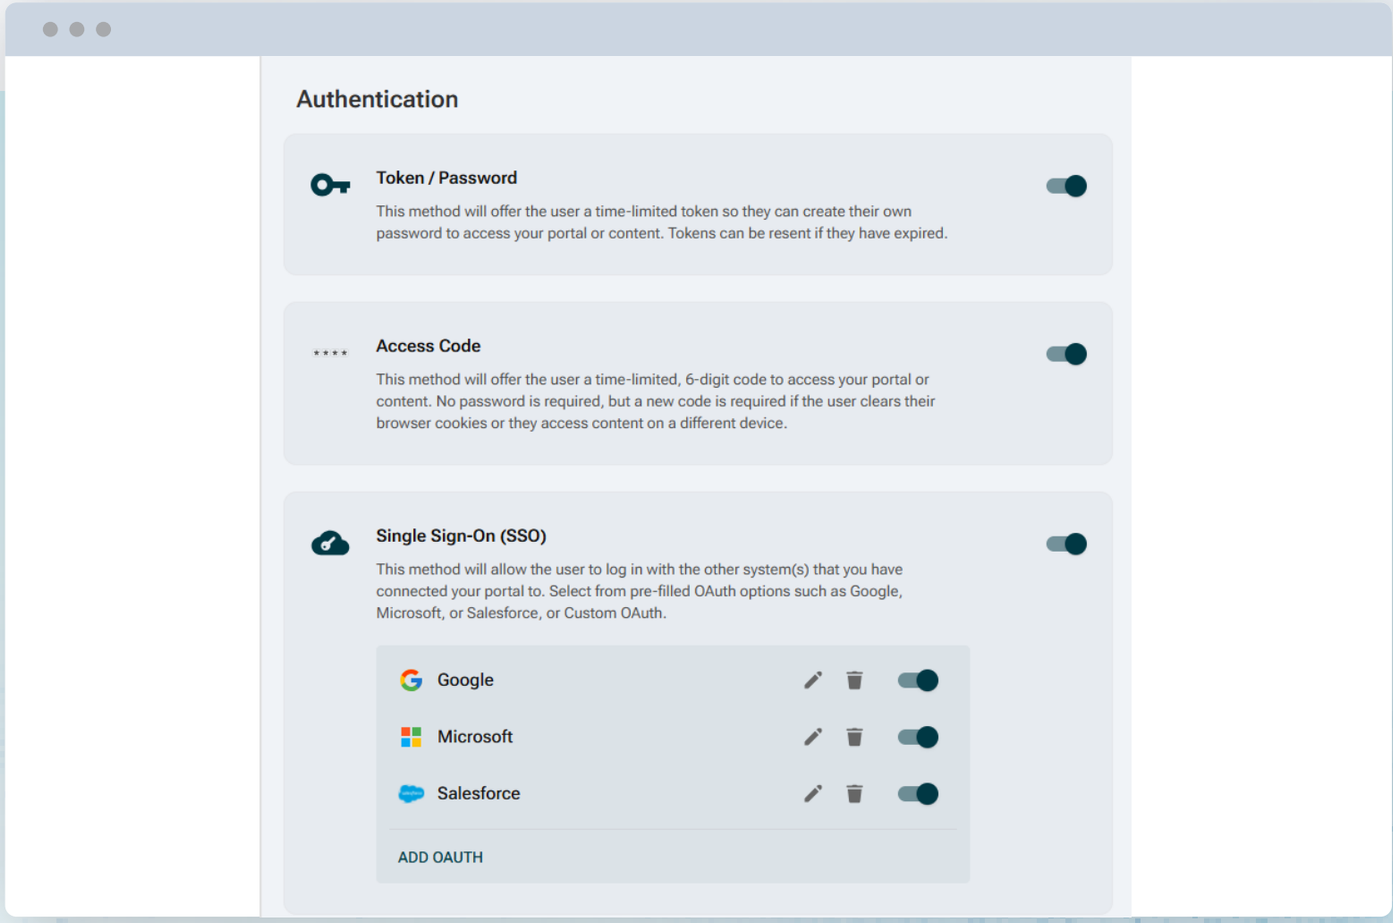

## Admin Audit Logs

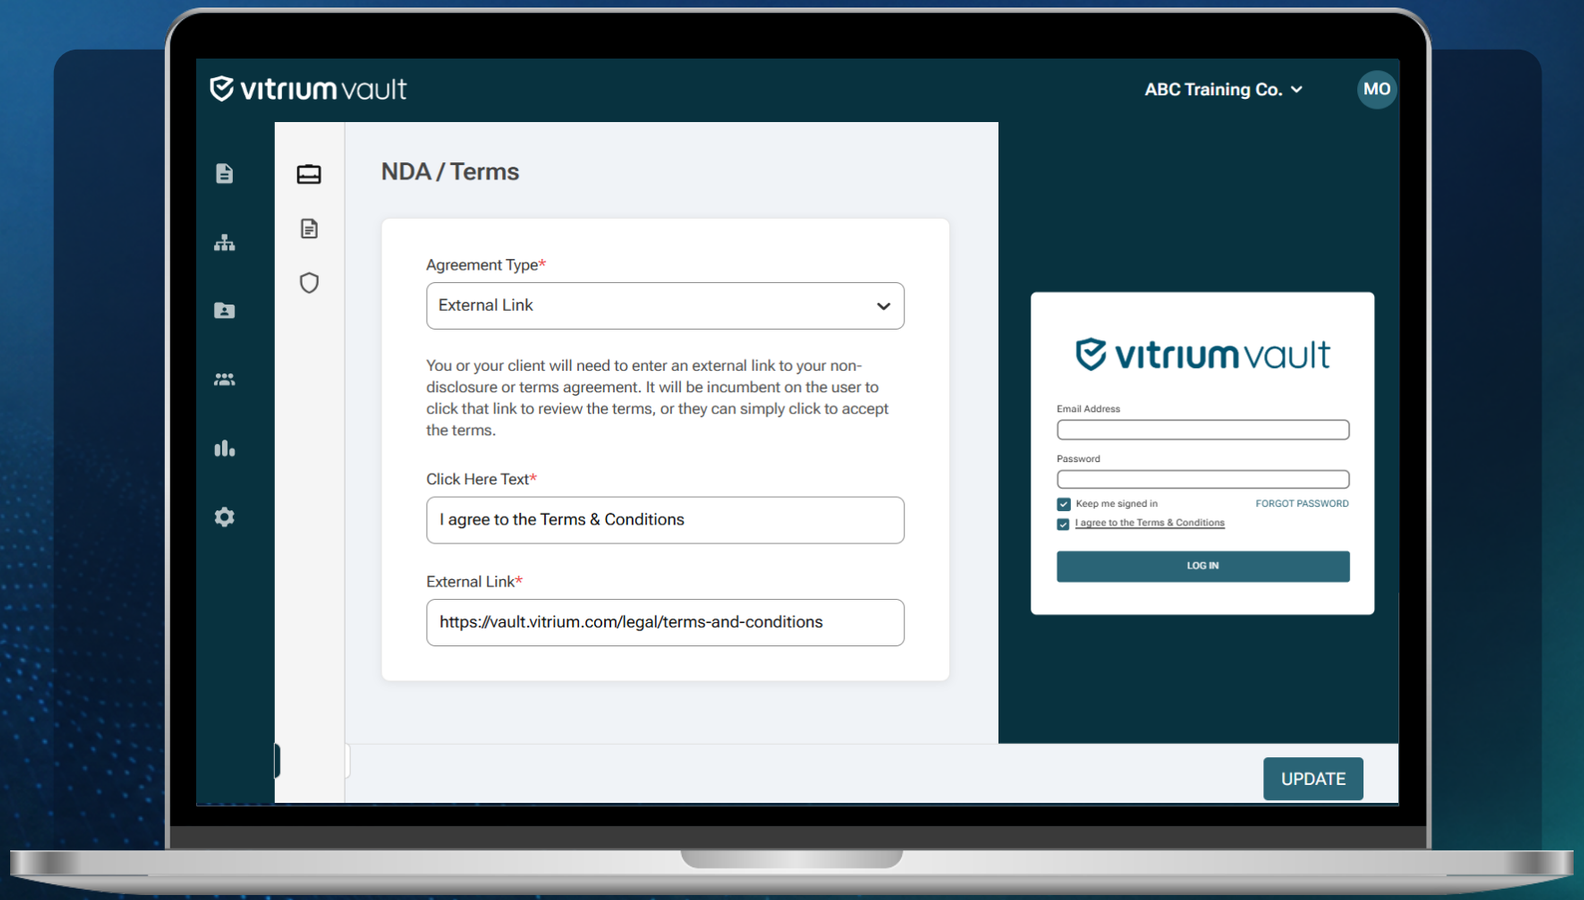

- Track activity of your admins & team members
- View date & time of login sessions, uploads, and more
- Know which content your team has uploaded or modified
- Get insights about when users were added or modified
- Understand when a DRM policy or watermark changes
- Use this data for compliance & audit purposes

## Authentication & Access

- Set different types of authentication methods for users: password, access code, or SSO
- Email users an authentication token to create their own password
- Send a time-limited 6-digit access code for users to access content
- Set up single sign-on (SSO) access with Microsoft, Google, or Salesforce*

*Only applicable to OAuth2.0 versions. Users must already be in Vitrium with permissions assigned to them before they can sign in.

## NDA / Terms Acceptance

- Choose how NDA/Terms are set up between data rooms and end users
- Deploy a built-in, pop-up acceptance method
- Users click to your hosted NDA/Terms page
- Use the pre-built, mutual NDA template or copy your own into the space provided
