Why Do M&A Firms Need Stronger Protection and Control?

01

Competitor Risk

A bidder enters a process, access financial files, pricing strategy or more to then walk away with sensitive information.

02

Trust at Stake

A leak, a wrongfully distributed file, or a poorly controlled handoff reflects on the firm, costing future opportunities.

03

Basic Tools Fall Short

With other tools, revoking access, restricting screen capture, or providing defensible audit trails are not an option.

04

Lack of Visibility

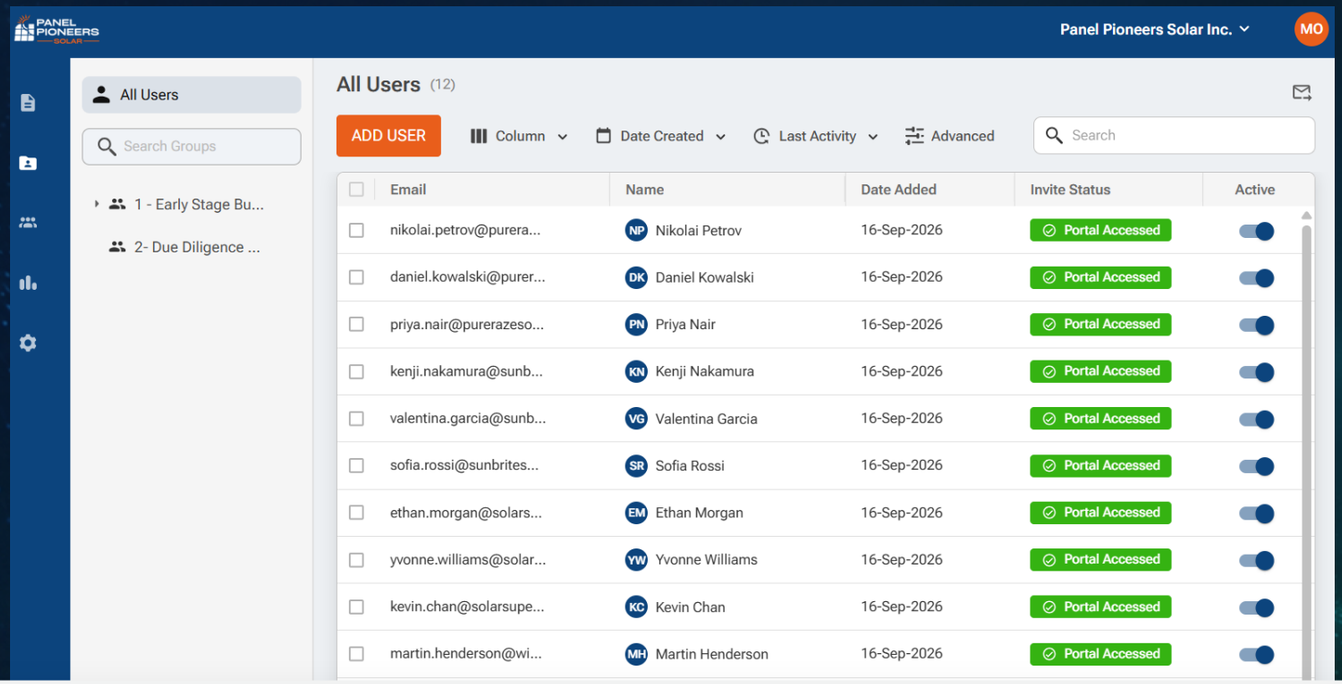

Without detailed analytics, firms lose clarity and control. Engaged bidders signal intent; inactive ones don't.

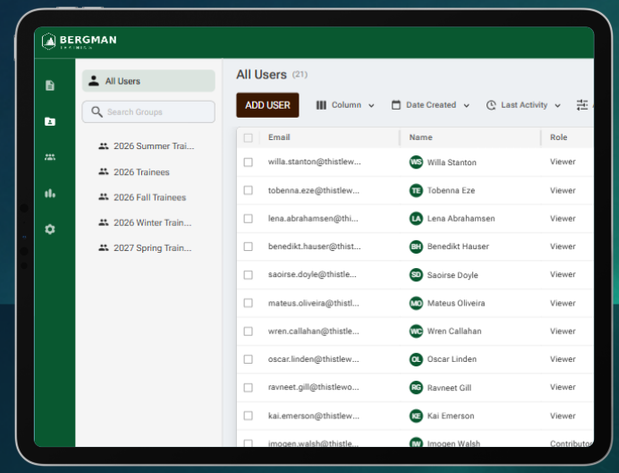

Vitrium Vault: How It Helps?

A secure, audit-ready data room purposely **built on 20+ years** of content protection and distribution experience.

Revoke Access Immediately

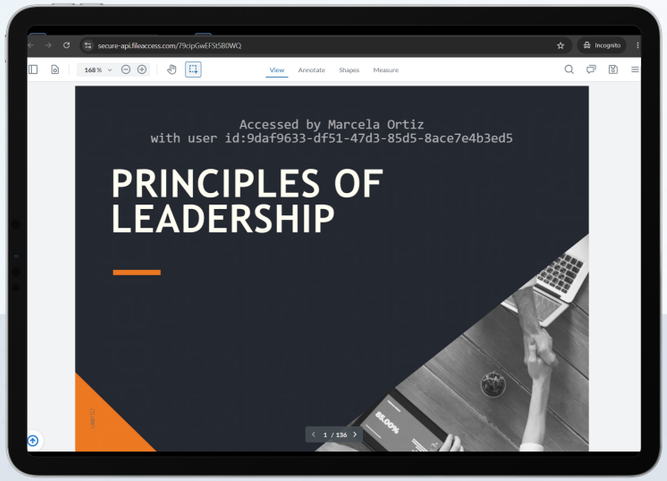

Remove a bidder the moment they exit the process. No copies left behind, and no further access to any files.

Stage-Gated Bidder Groups

Set up different bidder groups for each deal stage and assign permissions based on that stage.

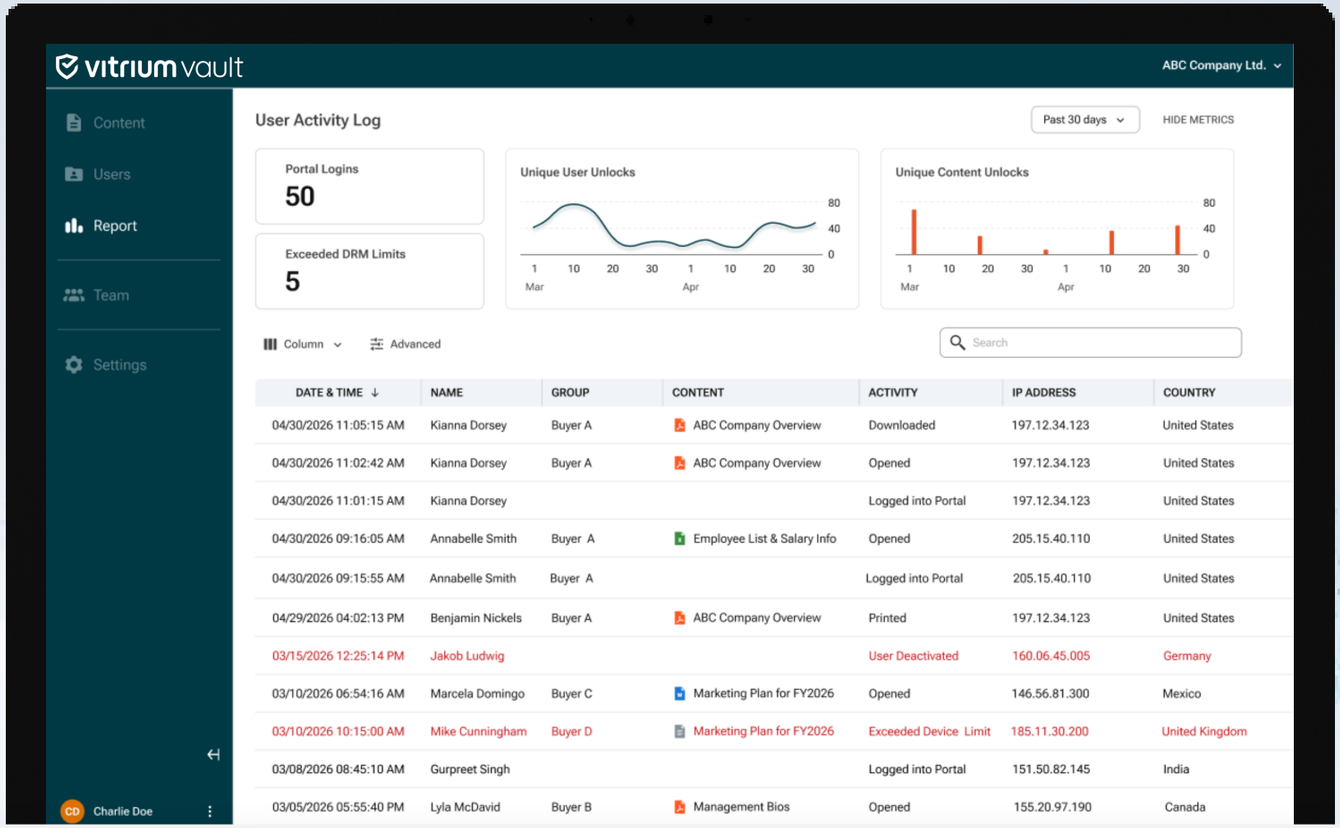

Dynamic Watermarking

Add each bidder's name, organization, IP address, and a date & time stamp as a watermark on every page of your documents.

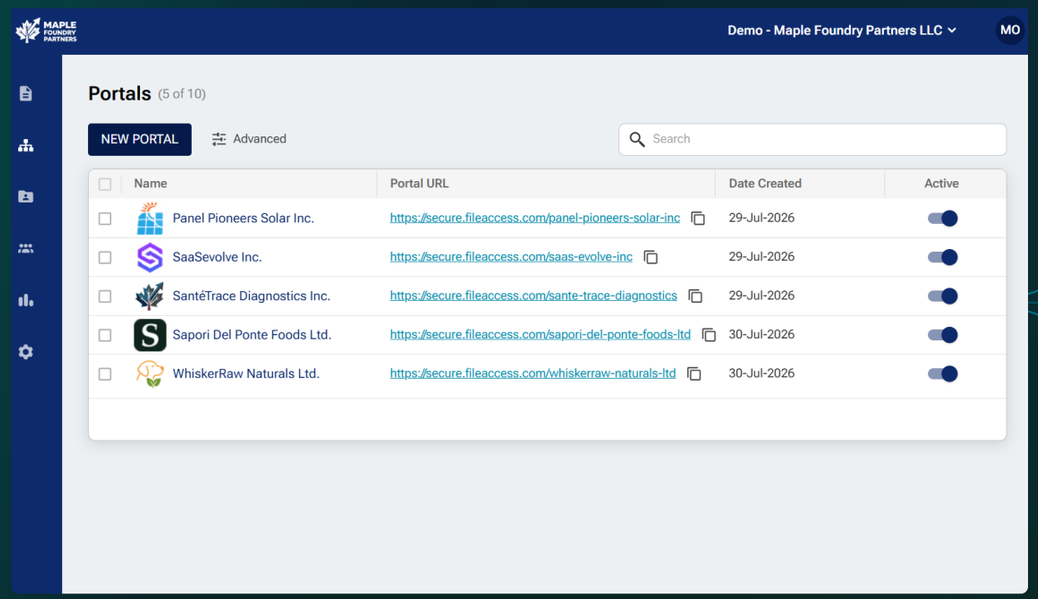

Real-Time Tracking

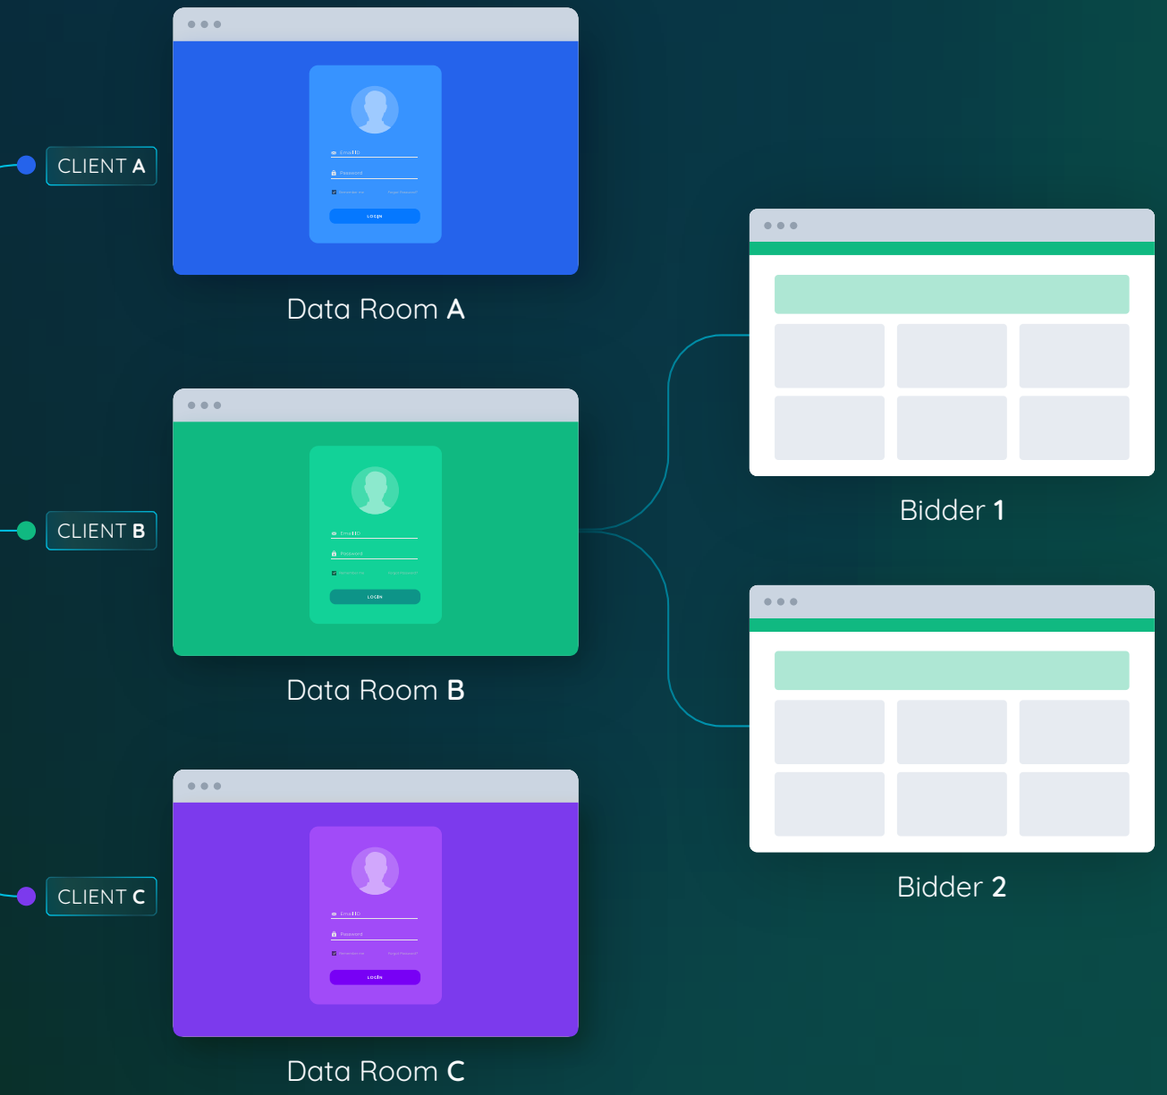

Gain insight into who's opening your content. Get user information, including the who, what, when, and where.

Multi-Deal Management

Each client gets its own branded data room.
Manage multiple mandates from a single account.

What Do M&A Firms Use Vitrium Vault For?

SELL-SIDE PROCESS

Managing a Competitive Auction

- Separate bidder environments in one portal
- Stage-gated access that expands as the process advances
- Watermarked CIMs, financials, and management decks
- Revoke access immediately when a bidder is eliminated

DUE DILIGENCE

Control Information Distribution

- Different permissions for different files or folders
- Two-way sharing: clients can upload sensitive files
- Set up different levels of access depending on user or stage
- Admin audit log tracks every access, permission change, activity, etc.

COMPLIANCE & LEGAL

Defensible Audit Trails

- Granular logs of every activity for admins and users
- Dynamic watermarks traceable to a specific user session
- Evidence base for NDA enforcement
- IP restrictions, device limits, print and download controls, and more
